

COVID-19 Antiviral Research Study

Learn about the Clementine Trial, exploring a potential **new antiviral treatment for people** who are 75+ or 18+ and immunocompromised who have tested **positive for COVID-19**.

Have COVID-19 but can't access Paxlovid?

You may be eligible for a clinical trial of a potential new COVID-19 antiviral treatment.

Pacific Clinical Research Network (PCRN)
Silverdale Medical is recruiting participants who test positive for COVID-19 but are not eligible for existing approved treatments like Paxlovid.

We can arrange to **see unwell COVID-positive patients the same day**.

What's Involved?

- Start study treatment within 4 days of symptom onset.
- Take oral medication (or placebo) twice daily for 5 days.
- 6 in-clinic visits + phone follow-ups.

Who Can Take Part?

Adults aged 18+ with confirmed COVID-19 and at risk of severe illness, including:

- People aged 75+
- Current or recent cancer treatment
- Diabetes, heart, lung, or kidney conditions
- On immunosuppressive medications

Why Participate?

Help researchers develop new antiviral treatments for those who can't access current options. All participants receive close medical support.
